## **ART (APPLIED RESEARCH & TECHNOLOGY) PRESENTS** **PEDAL BOARD POWER SOLUTION**

***December 5, 2019 (Toronto, On)-*** As a follow up to the ART guitar solution pedals introduced at NAMM 2019, Applied Research & Technology is proud to introduce the ISO-8U Power Supply for pedal boards appearing at Winter NAMM 2020

The ISO-8U Power Supply provides 9V or 12V DC power for your pedals. Each output is isolated to remove ground loops. One output is adjustable from 4-9V to simulate a dying battery. Each fixed output has a selectable voltage between 9V or 12V DC.

Two high power outputs can provide 250mA. All other outputs are capable of providing up to 100mA. Each output is individually current limited and circuit protected. An output status indicator goes on when there is a fault (i.e. short, current protection, or temperature overload).

A USB type A jack can provide high power charging up to 10 watts. The unit comes with a wide variety of cables to connect your pedals including: standard barrel jacks, 3.5mm connections and a battery clip adapter.

The ISO-8U Power Supply is a must have for guitarists with multiple pedals. Steve Hendee, Director of US Sales at Yorkville Sound, comments, "No more guess work if the venue stage or rehearsal space has spare outlets to make sure your pedals get the power they need. It's also more common place for players to refer to their phones or tablets during a gig. The ISO-8U Power Supply makes sure you never run out of power at the gig."

**Experience the ART ISO-8U Power Supply this Winter NAMM at Yorkville Sound's showroom #17206.**
