SERVICE MANUAL

SA218S

SMT Disclaimer

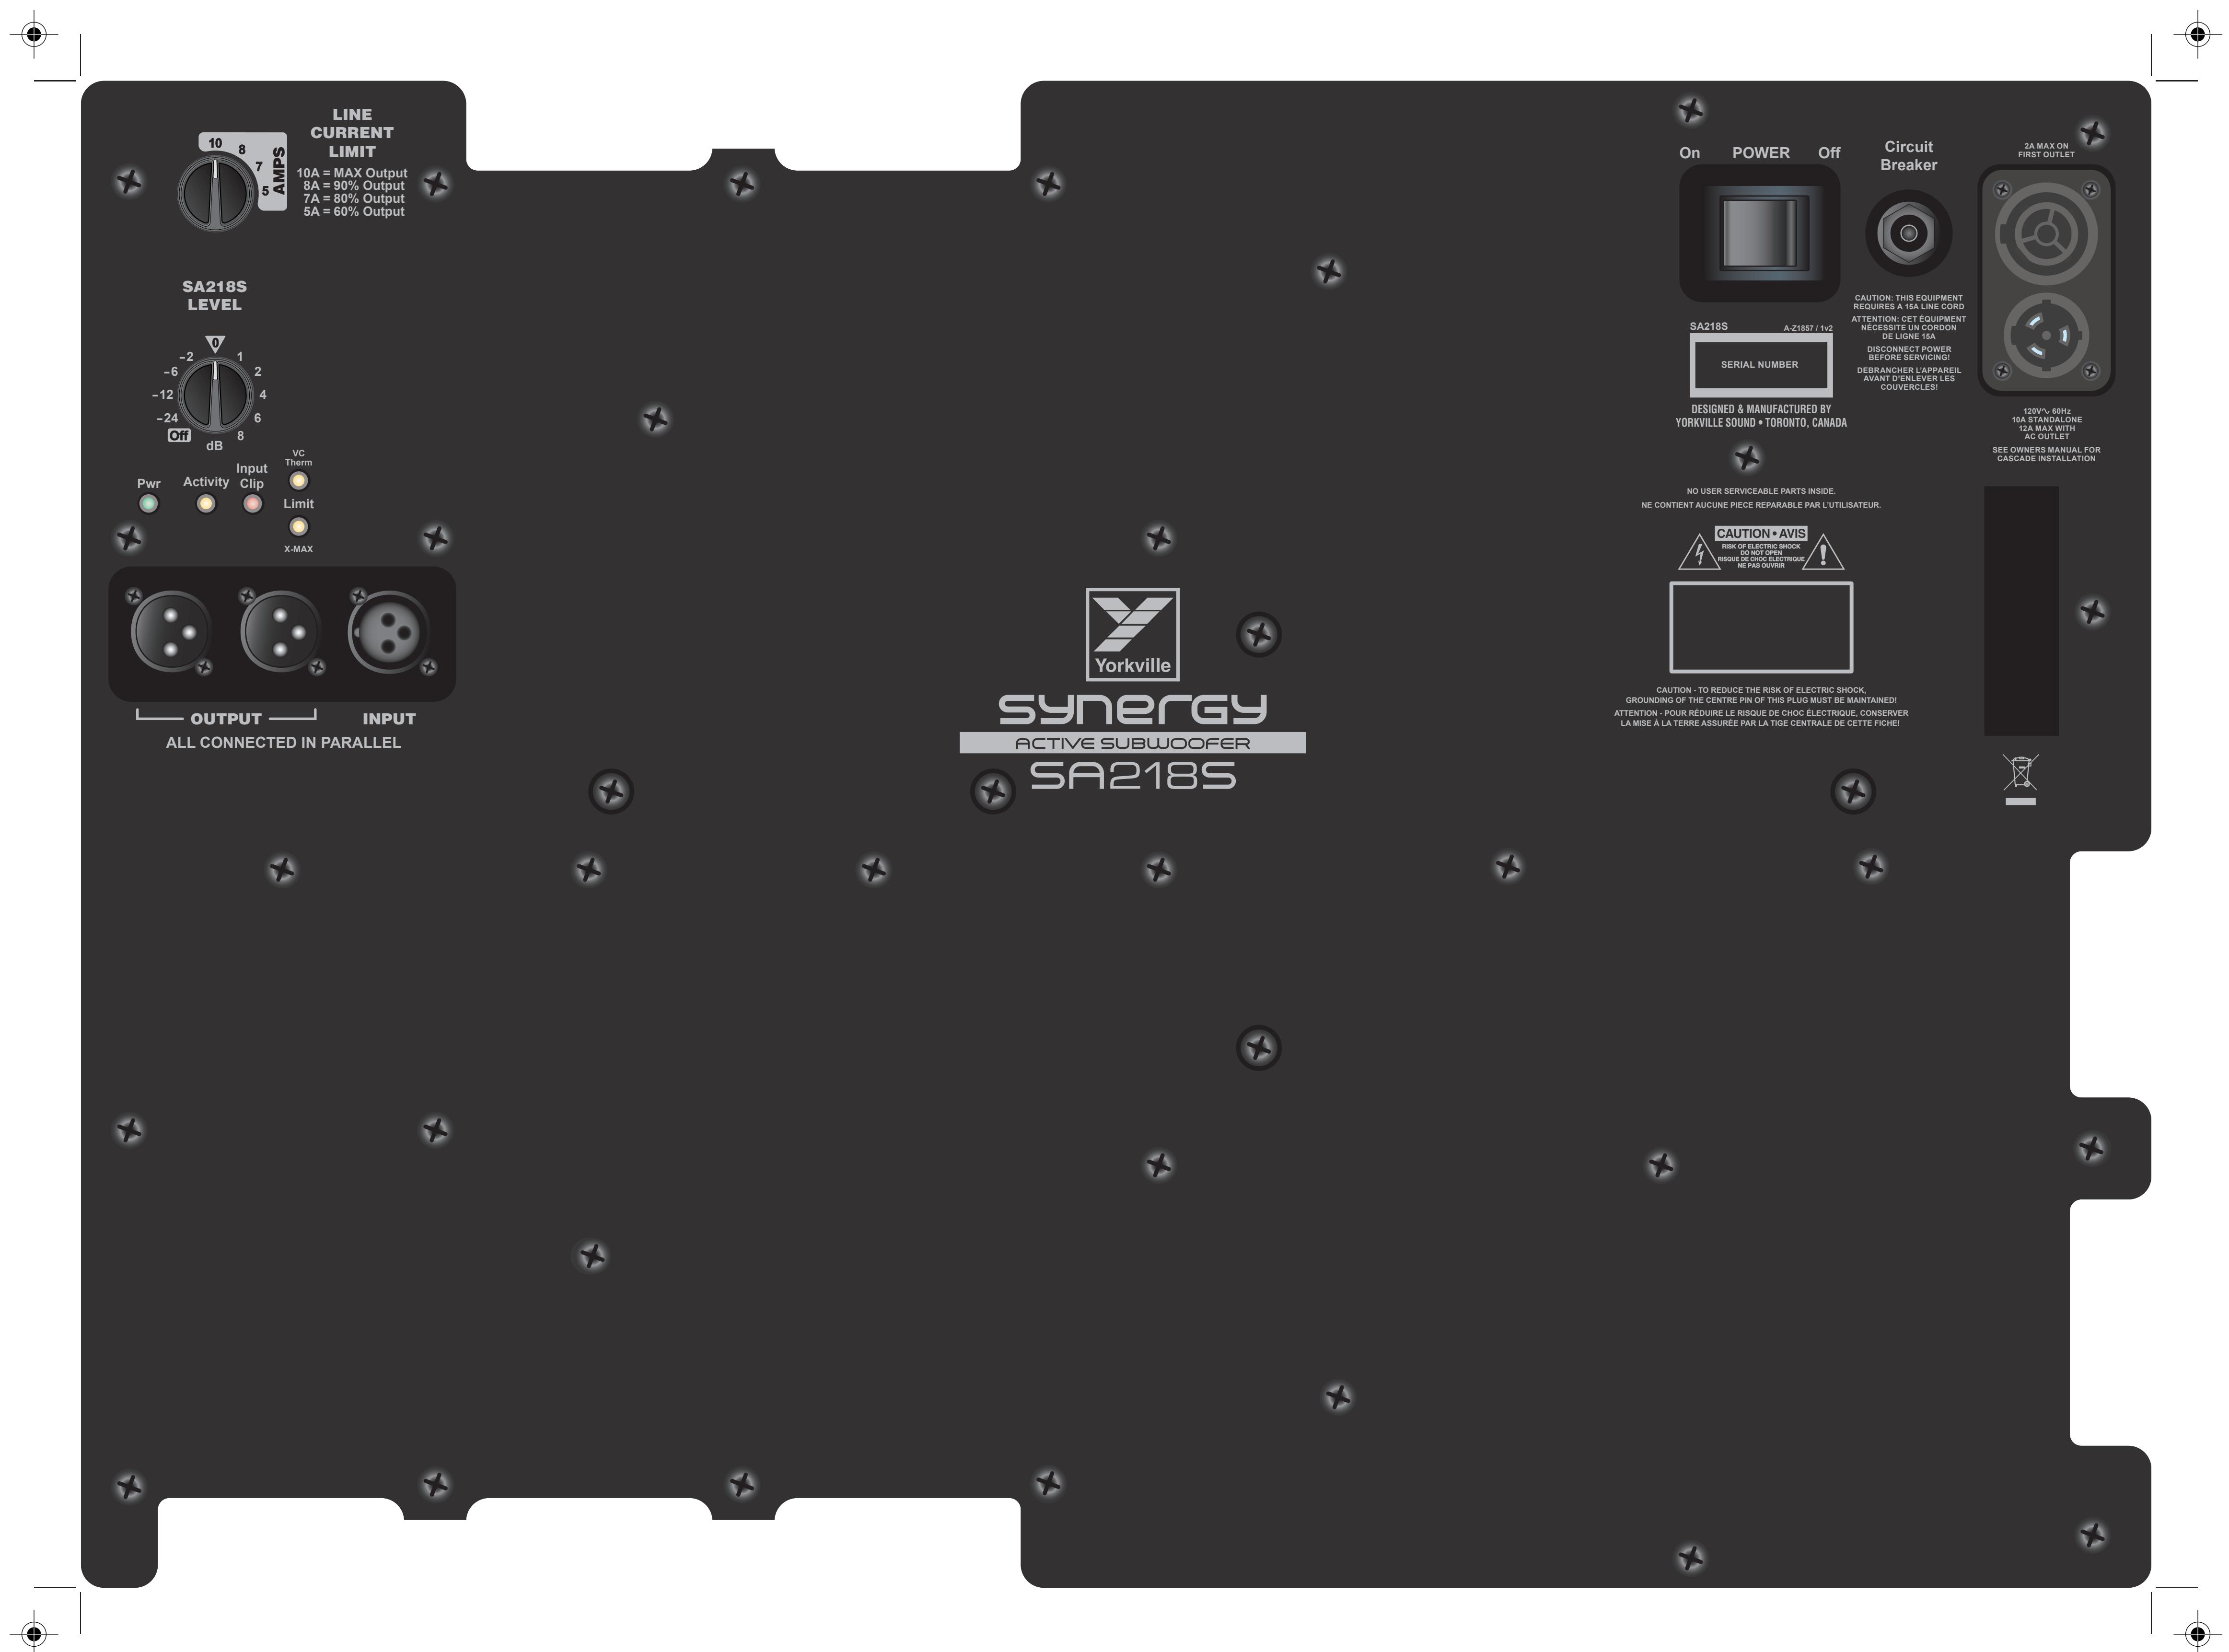

Due to the complex nature of the use of SMT installed components in Yorkville equipment, we highly caution all service technicians in attempting to repair or replace SMT factory installed components.

Many of these components may be glued prior to initial soldering.

Replacing SMT components requires expensive specialized de-soldering equipment and training.

Yorkville Sound will repair and replace defective SMT components to ensure proper quality assurance and installation is maintained.

Quality and Innovation Since 1963
Printed in Canada

Specifications

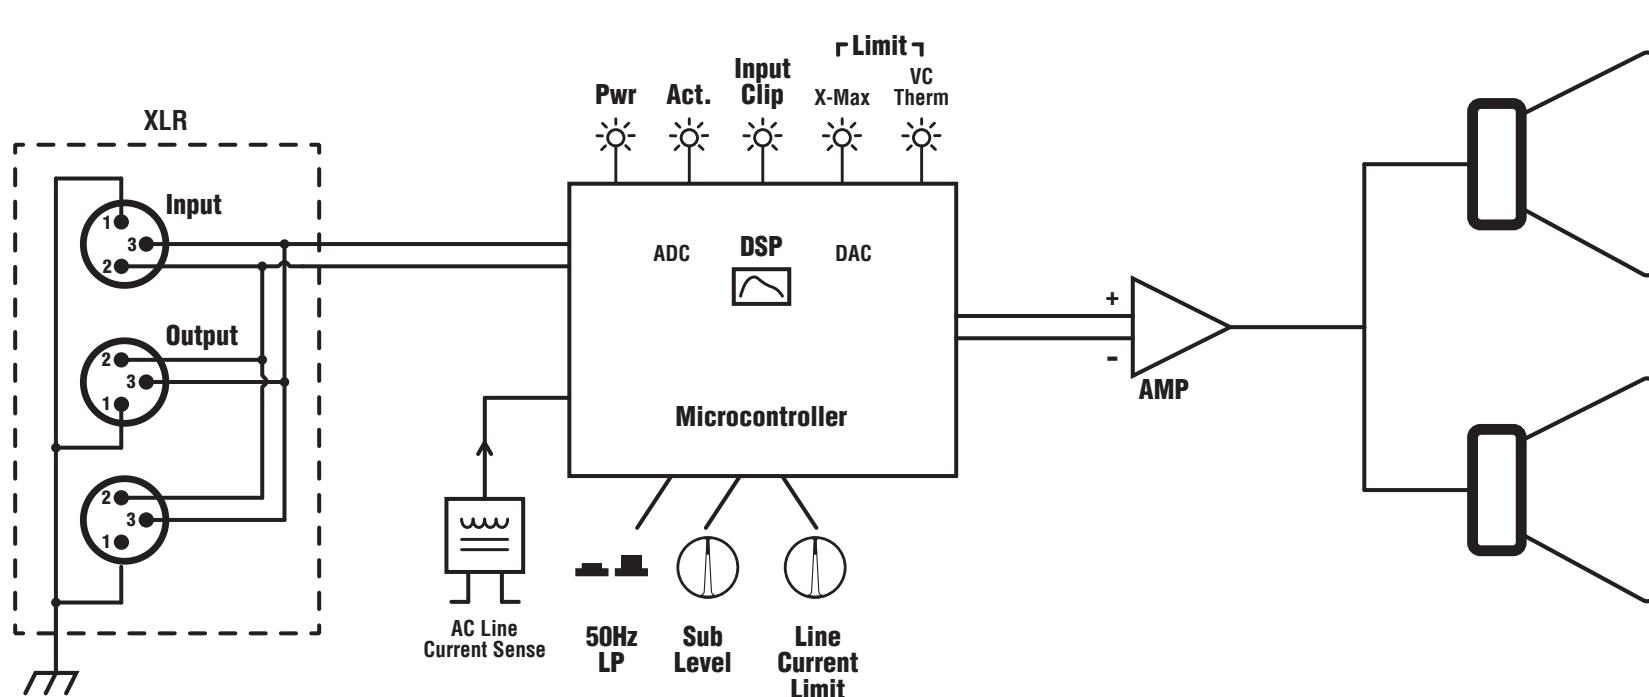

System Type Active Subwoofer
Active or Passive Active
Program Power (watts) 6000 watts Program (12000 watts peak)
Measured Max SPL (C-Weighted, Max Hold) 130 dB Cont. 142 dB Peak
Frequency Response (Hz +/- 3dB) 30 Hz - 100 Hz
Crossover Frequency (Hz) 100 Hz lowpass
Cabinet Configuration Bass Reflex
Driver Configuration 2x18-inch LF woofer
LF Driver(s) 18-inch Neodymium with 4.5-inch Voice Coil
LF Impedance (ohms) 8 ohm Load x 2
LF Protection Excursion, Voice Coil Thermal (RMS)
LF Amplifier Type Class D
Cooling Scheme Convection
Power Cable Removable Locking Powercon True Input and Loop Thru Output
Power Switch Yes
Inputs 1 XLR with 2x XLR Parallel out, Impedance 35k ohms
Input Sensitivity (Vrms Sine) Line in 1.4 at center, 0.56 at max
Level Controls Volume, -∞,0dB,10dB (Min, Top, Max)
Limit Controls Thermal Limiter Advance for power consumption management
Limiter Excursion, Thermal (RMS), Clipping
LED Indicators Power, Excursion Limit, Thermal (RMS) Limit, Input Clip, Activity
Enclosure Materials Multiply 15mm Birch Plywood
Stacking Feature Interlocking Rubber Feet (Sides)
Covering / Finish Paint
Dimensions (DWH xbackW, inches) 28.872 (including Casters) x 44 x 22
Dimensions (DWH xbackW, cm) 73.33 x 111.76 x 58.88
Weight (lbs/kg) 248/112.49

Spécifications

Type de système	Caisson de Basse actif
Actif ou passif	Actif
Puissance du programme (watts)	6000 watts Programme (12000 watts crête)
NPA maximum mesuré (pondéré C, maintien maximum)	130dB Cont. 142 dB crête
Réponse en fréquence (Hz +/- 3dB)	30 Hz - 100 Hz
Fréquence de coupure (Hz)	Passe-bas 100 Hz
Configuration de l'enceinte	Haut-parleur à pavillon
Configuration des haut-parleurs	2x18-inch LF woofer
Driver(s) BF	Néodyme de 15 pouces avec bobine mobile de 4,5 pouces
Impédance BF (ohms)	Charge de 4 ohms
Protection BF	Excursion, Thermique de la bobine mobile (RMS)
Type d'amplificateur BF	Classe D
Système de refroidissement	Convection
Cordon d'alimentation	Entrée Powercon True et sortie Loop Thru verrouillables et amovibles
Interrupteur d'alimentation	Oui
Entrées	1 XLR avec 2x XLR sortie parallèle, Impédance 35k ohms
Sensibilité d'entrée (Vrms sinus)	Entrée ligne 1,4 au centre, 0,56 au maximum
Commandes de niveau	Volume, -∞,0dB,10dB (Min, Top, Max)
Commandes d'limiteur	Limiteur thermique Advance pour la gestion de la consommation d'énergie
Limiteur	Excursion, thermique (RMS), écrêtage
Indicateurs DEL	Puissance, Limite d'excursion, Limite thermique (RMS), Clip d'entrée, Activité
Matériaux du boîtier	Contreplaqué de bouleau multiplis de 15 mm
Caractéristiques d'empilage	Pieds en caoutchouc emboîtables (côtés)
Revêtement / Finition	Peinture
Dimensions (PLH x L arrière, pouces)	28.872 (y compris les roulettes) x 44 x 22
Dimensions (PLH x L arrière, cm)	73.33 x 111.76 x 58.88
Poids (livres/kg)	248/112.49

PCB ASSEMBLY DOCUMENTATION

GENERAL ASSEMBLY INSTRUCTIONS

- Be lead so has have arts in correct orientation and cut short to less than the length of a . No exception unless a move by Production Engineering.
- A yellow cliparts with longer leads than the length of the assembly must be cut shorter either prior to wave-soldering or after assembly PCB is shipping. No exception unless a move by Production Engineering.
- After Wave apply RTV to all holes indicate a tall capacitor.
- Use a rig shaker to help stabilize the PCB so that it is easier to mount the 4249 clip with the setting screw.
- Be sure tightening screws 8832 or xstr springs 4249 are sure that it is aligned with Q4. Also silicon 4124 should be overhanging the edge of the heatsink. See picture below.

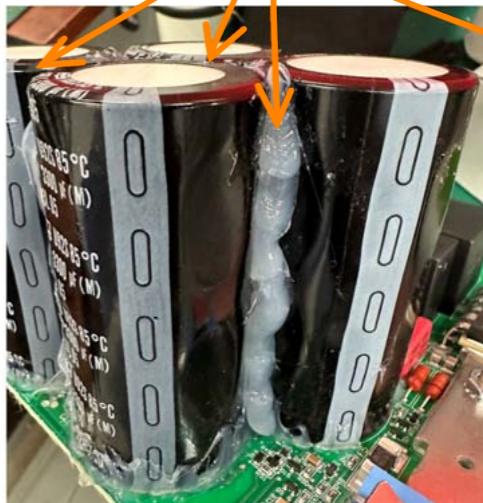

Use a rig shaker to hold the board to align setting clip screw

RTV INSTRUCTIONS:

ADD RTV BETWEEN AND AROUND BASE OF CAPS C12, C13, C14, AND C15 AFTER WAVE SOLDER

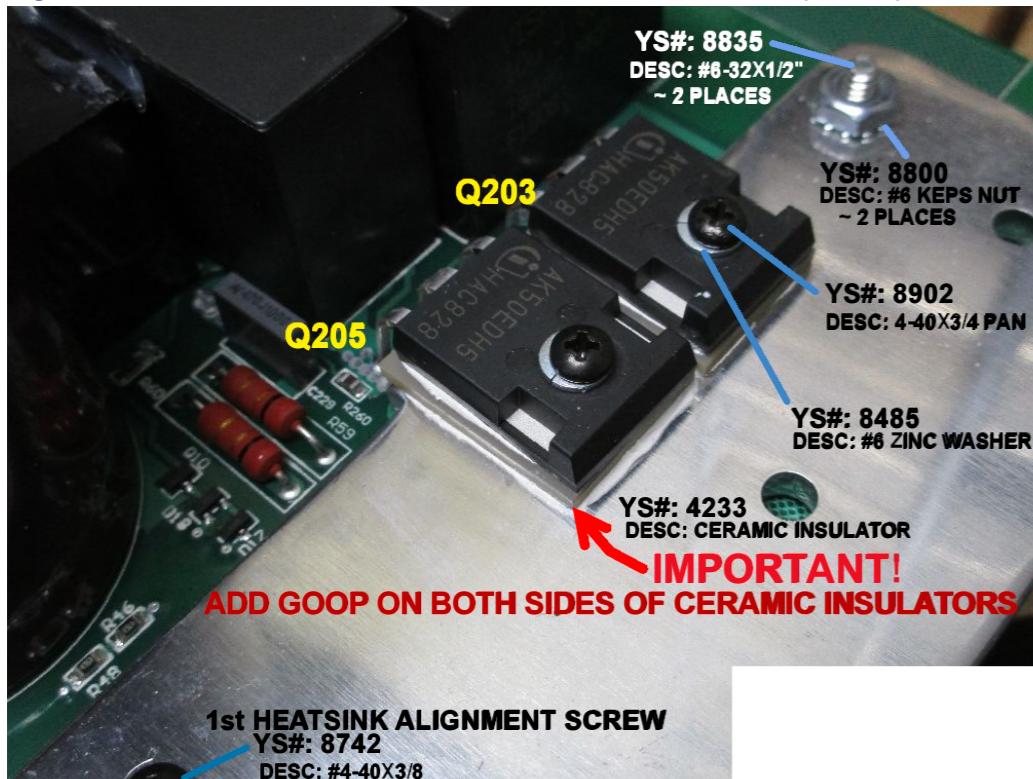

ADD RTV

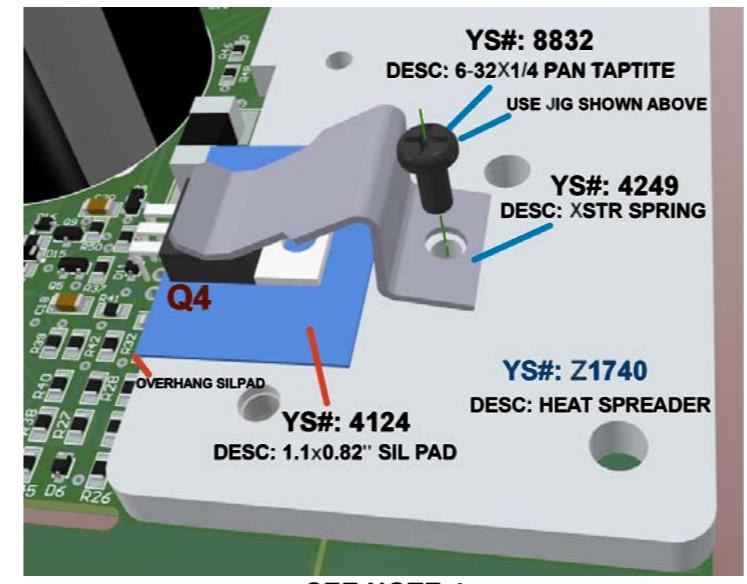

MOUNTING HARDWARE INSTRUCTIONS FOR HEAT SPREADER 1740:

- First install 8742 screw to align heatsink to Z1740
- I stall all devices, shown in pictures below, o Heat Spreader

TOP VIEW:

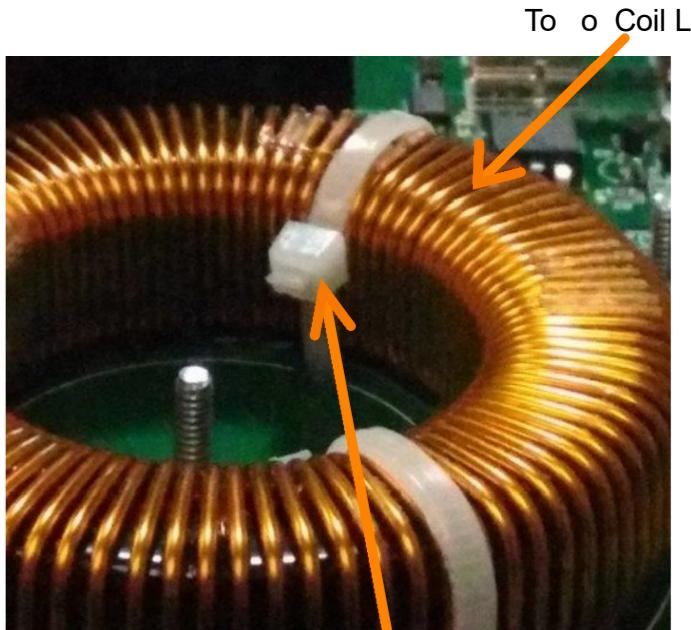

MOUNTING HARDWARE FOR Q203 Q205:

SEE NOTE 4.

BOTTOM VIEW:

Ensure that all fasteners are applied below the top of the coil.

PINOUT DIAGRAMS

THIS SHEET CONTAINS A CHANGE HISTORY LOG, A LIST OF THE POTS & KNOBS AND A LEADS & PINS REFERENCE SECTION.

SYNERGY

ACTIVE SUBWOOFER

SA218S

1. Power Switch and Indicator

The green power LED illuminates when the power switch is turned to the On position and AC voltage is supplied. When the power is removed or the power switched

is moved to the off position the green power indicator will blink while the power supply is discharging. The processing circuitry will not reboot unless the power supply is fully discharged before being turned back on. It is not necessary to reboot however. Turning the power back on before the power supply is discharged will simply resume normal operation.

2. PowerCON TRUE AC Loop Thru

As a standard, the AC inlet on the SA218S accepts locking PowerCON TRUE power cords. There is also an AC outlet that can be used to loop power through to other cabinets in your array using a male to female PowerCON TRUE looping power cord. Check with your local Yorkville dealer for availability of these accessory cords.

IMPORTANT: DO NOT EXCEED THE CURRENT RATING OF THE POWER and ACCESSORY CORDS. PLEASE READ THE SECTION OF THIS MANUAL CALLED "CASCADE INSTALLATION."

3. Input Jack

This female-XLR accepts line level XLR microphone cables. For best noise reduction use balanced sources.

4. Dual Link Outputs

These XLR male connectors can be used with a standard XLR cable to daisy-chain up to 20 SA218S cabinets without signal degradation. Simply loop from one cabinet's Link jack to the next cabinet's Input jack. In many cases this limit of 20 cabinets can be exceeded, consult Yorkville Sound for more details.

5. SA218S Level Control

This control adjusts the volume level of the SA218S relative to the input signal level. Mixers and other audio sources connected to the SA218S tend to have different output voltages, which mean the level control on the SA218S is used to fine tune the cabinet's volume relative to the mixer settings. It is perfectly acceptable to set the SA218S Level above or below the center 0 dB setting.

6. Clip, X-Max, VC-Therm, Activity Indicators

The Clip and Limit LED indicators illuminate to guide the user to proper operating levels.

Illumination either of the yellow Limit LEDs indicates that a level has been reached where the SA218S limiters are reducing the signal internally to prevent damage or distortion. It also indicates that further increases in input level or increasing the SA218S Level control position will not appreciably increase acoustic output.

The red Clip LED indicates that the input level is excessive and further increases in level will cause severe distortion. The input signal should be reduced at the source until Clip activity ceases. The clip indicator comes on at 12 Vrms, 16 volts peak. The input clips at 17 Vrms, 24 volts peak.

The activity Indicator comes on at 5 mVrms or -45 dBV.

7. Line Current Limit Control

The Line Current Limit control allows the power to be reduced to allow operation on limited power availability. Full power transients will be allowed through but if the average power is excessive then the power will be limited. This control works by advancing the limiter that limits the voice coil temperature and by monitoring the current draw. In the 10 amp position (5 amp CE) the average power is limited only by the voice coil temperature. In the 8 amp position (4 amp CE) with most music, the limiter will be only active occasionally depending on the music content. In the 7 amp position (3.5 amp CE) certain types of music will not be limited, primarily music without deep bass or where the bass is unprocessed. The 5 amp position (2.5 amp CE) will significantly reduce the output when the music content has continuous bass content below 45 Hz. The green power on indicator will dim to indicate when the line current limiter is active. A small amount of dimming indicates that the advanced thermal limiter is active while significant dimming indicates that the line current monitoring system has detected excessive line current. Low line voltage typically due to long power supply cables may cause excessive line current, the line current monitoring system will prevent this from tripping the power source circuit breakers.

SYNERGY ACTIVE SUBWOOFER SA218S

1. Interrupteur et Indicateur d'Alimentation

Le voyant d'alimentation vert s'allume lorsque l'interrupteur d'alimentation est réglé sur la position ON et que la tension CA est appliquée. Lorsque l'alimentation est coupée ou que l'interrupteur d'alimentation est placé en position OFF, le voyant vert d'alimentation clignote pendant que l'alimentation se décharge. Le circuit de traitement ne redémarrera pas si l'alimentation n'est pas complètement déchargée avant d'être remise sous tension. Il n'est cependant pas nécessaire de redémarrer. Si vous remettez l'appareil sous tension avant que l'alimentation ne soit déchargée, le fonctionnement normal reprendra simplement.

2. Boucle CA PowerCON TRUE

En standard, l'entrée CA du SA218S est compatible avec les cordons d'alimentation PowerCON TRUE à verrouillage. Il y a également une prise CA qui peut être utilisée pour alimenter en boucle d'autres enceintes de votre réseau en utilisant un cordon d'alimentation PowerCON TRUE mâle à femelle. Vérifiez auprès de votre revendeur Yorkville local pour vérifier la disponibilité de ces cordons accessoires.

IMPORTANT: NE PAS DÉPASSER LE COURANT MAXIMAL DES CORDONS D'ALIMENTATION ET D'ACCESSOIRES. Veuillez lire la section du manuel du propriétaire appelé "INSTALLATION EN CASCADE."

3. Prise d'Entrée

Cette prise femelle-XLR est compatible avec les câbles de microphone XLR de niveau ligne. Pour une meilleure réduction du bruit, utilisez des sources équilibrées.

4. Sorties Dual Link

Ces connecteurs mâles XLR peuvent être utilisés avec un câble XLR standard pour relier en chaîne jusqu'à 20 enceintes SA218S sans dégradation du signal. Il suffit de faire une boucle entre la prise Link d'une enceinte et la prise Input de l'enceinte suivante. Dans de nombreux cas, cette limite de 20 enceintes peut être dépassée, consultez Yorkville Sound pour plus de détails.

5. Commande de Niveau SA218S

Cette commande permet de régler le niveau de volume du SA218S par rapport au niveau du signal d'entrée. Les tables de mixage et autres sources audio connectées au SA218S ont tendance à avoir des tensions de sortie différentes, ce qui signifie que la commande de niveau sur le SA218S est utilisé pour affiner le volume de l'enceinte par rapport aux réglages de la table de mixage. Il est parfaitement acceptable de régler le niveau du SA218S au-dessus ou au-dessous du réglage central de 0 dB.

6. Indicateurs d'Activité Clip, X-Max, VC-Therm,

Les indicateurs DEL Clip et Limit s'allument pour guider l'utilisateur vers les niveaux de fonctionnement appropriés.

L'illumination de l'une ou l'autre des DEL jaunes de limite indique qu'un niveau a été atteint où les limitateurs du SA218S réduisent le signal de façon interne pour éviter tout dommage ou distorsion. Il indique également que d'autres augmentations du niveau d'entrée ou de la position de la commande de niveau du SA218S n'augmenteront pas sensiblement la sortie acoustique.

La DEL Clip rouge indique que le niveau d'entrée est excessif et que toute augmentation supplémentaire du niveau entraînera une distorsion grave. Le signal d'entrée doit être réduit à la source jusqu'à ce que l'activité d'écrêtage cesse. La DEL CLIP s'allume à 12 Vrms, 16 volts crête. L'entrée s'écrète à 17 Vrms, 24 volts crête.

L'indicateur d'activité s'allume à 5 mVrms ou -45 dBV.

7. Commande De Limite De Courant De Ligne

La commande de limite de courant de ligne permet de réduire la puissance pour permettre un fonctionnement avec une disponibilité de puissance limitée. Les transitoires à pleine puissance seront permises, mais si la puissance moyenne est excessive, la puissance sera limitée. Cette commande fonctionne en faisant avancer le limiteur qui limite la température de la bobine mobile et en surveillant la consommation de courant. En position 10 ampères (5 ampères CE), la puissance moyenne est limitée uniquement par la température de la bobine mobile. En position 8 ampères (4 ampères CE), avec la plupart des programmes musicaux, le limiteur ne sera actif qu'occasionnellement, en fonction du contenu musical. En position 7 ampères (3.5 ampères CE), certains types de musique ne seront pas limités, principalement la musique sans basses profondes ou lorsque les basses ne sont pas traitées. La position 5 ampères (2.5 ampère CE) réduira significativement la sortie lorsque le contenu musical contient des basses continues en dessous de 45 Hz. Le témoin vert de mise sous tension s'assombrit pour indiquer que le limiteur de courant de ligne est actif. Une faible gradation indique que le limiteur thermique avancé est actif, tandis qu'une gradation importante indique que le système de surveillance du courant de ligne a détecté un courant de ligne excessif. Une faible tension de ligne, généralement due à de longs cordons d'alimentation, peut provoquer un courant de ligne excessif. Le système de contrôle du courant de ligne empêche ce phénomène de déclencher les disjoncteurs de la source d'alimentation.

Pour obtenir le manuel de utilisateur visitez notre site Web à <http://www.yorkville.com/manuals/>
